Problems reading close up?

→ Can you read this without your reading glasses?

## What is Presbyopia?

Presbyopia commonly occurs when the lens of the eye becomes more rigid and does not flex as easily. As a result, it becomes more difficult to read at close distance. Presbyopia is a refractive error that is a process of ageing.

### Presbyopia affects most people from the age of 40 or older

The main symptom is difficulty in reading fine print. You know you have presbyopia when you have difficulty reading a restaurant menu, finding someone's phone number in your mobile phone or looking at price tags while shopping.

## How can we treat Presbyopia?

Presbyopia can be treated through wearing reading glasses, contact lenses, by surgical techniques such as the implantation of intraocular lenses or by using a femtosecond laser. The latest LASIK option from Technolas to treat presbyopia is **SUPRACOR**. **SUPRACOR** is quick, easy, safe<sup>1</sup> and efficient<sup>1</sup>.

### How does SUPRACOR work?

Based on the well-known LASIK technique, the **SUPRACOR** procedure's proprietary corneal shape design provides excellent far, intermediate and near vision.

**SUPRACOR** could also be an option for patients with previous LASIK surgery. The procedure takes place in the clinic. A few hours after undergoing the **SUPRACOR** procedure, you will typically be able to read without glasses or contact lenses.

**SUPRACOR**, the LASIK solution for presbyopia.
